                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Description

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ઠે
                                                                                                                            Sequence 37, Application US/08743894B

Patent No. 5965699

GENERAL INFORMATION:
APPLICANT: James J. Schmidt
APPLICANT: Karen A. Bostian
TITLE OF INVENTION: Assay for the Proteolytic Activity of Serotype A Neurotoxin fr
NUMBER OF SEQUENCES: 56
CORRESPONDENCE ADDRESS: 56
CORRESPONDENCE ADDRESS: ADDRESS: ADDRESSE: MCMR-JA Attn.John Moran-Patent Atty
STREET: USA MRMC - 504 Scott Street
CITY: FORT DETRICK

Patent No. 6169074

GENERAL INFORMATION:
TITLE OF INVENTION: NEUTOTRANSMITTER SECRETION BY NEURONAL CELLS
TITLE OF INVENTION: NEUTOTRANSMITTER SECRETION BY NEURONAL CELLS
NUMBER OF SEQUENCES: 29
CORRESPONDENCE ADDRESS:
ADDRESSEE: Fish & Richardson P.C.
STREET: 4225 Executive Square, Suite 1400
CITY: La Johla
STATE: CA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Length 206;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      0; Indels
ZIP: 94306
COMPUTER READABLE FORM:
MEDIUM TYPE: Floppy disk
COMPUTER: IBM PC compatible
COMPUTER: IBM PC compatible
OPERATING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: PatentIn Release #1.0, Version #1.25
CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/08/393,985
FILING DATE:
CLASSIFICATION NUMBER: US/08/393,985
ATTORNEY/AGENT INFORMATION:
NAME: Sholts, Charles K.
REGISTRATION NUMBER: 38,615
REFERENCE/DOCKET NUMBER: 36,600-0152
TELECOMMUNICATION INFORMATION:
TELEPHONE: (415) 324-0960
INFORMATION FOR SEQ ID NO: 18:
SEQUENCE CHARACTERISTICS:
LENGTH: 206 anino acids
TYPE: amino acids
TYPE: amino acids
TYPE: amino acids
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 COMPUTER READBALE FORM:

--- TISSUE SPECIFICITY: Neurons of the neocortex, hippocampus, piriform cortex, anterior thalamic nuclei, pontine nuclei, a granule cells of the cerebellum.
--- SIMILARITY: Belongs to the SNAP-25 family.
--- SIMILARITY: Contains 2 t-SNARE coiled-coil homology domains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                92 Cys-rich.

SUBUNIT: Part of the SNARE core complex containing SNAP25, VAMP2 SUBUNIT: Part of the SNARE core complex binds CPLX1. Interacts with TRIM9, RIMS1 and SYALA. This complex binds CPLX1. Interacts with TRIM9, RIMS1 and SNAP258P. Bindis STABPE. Found in a ternary complex with STX1A ALTERNATIVE PRODUCTS:

Event-Alternative Splicing, Named isoforms=2;

Comment-Isoforms differ by the usage of two alternative homologous exons (5a and 5b) which encode for positions 56 to 94 and differ only in 9 positions out of 39;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       SNP25 CHICK STANDARD; PRT; 206 AA.

MEDLINE-21822661, PubMed=11832227, DOI=10.1016/S0896-6273 (02) 00583-4; ACHON X., Tomchick D.R., Kovrigin B., Arac D., Machius M., Suedhof T.C., Rizo J.;

Three-dimensional structure of the complexin/SNARE complex.";

Neuron 33:397-409(2002).

L. FUNCTION: t-SNARE involved in the molecular regulation of neurotransmitter release. May play an important role in the proteins involved in vesicle docking and membrane fusion.

PYMADTION: proteins involved in vesicle docking and membrane fusion.

STUBUNIT: Part of the SNARE core complex containing SNARES.

-I- SUBUNIT: Part of the SNARE CPLX1. Interacts with TRIM9, RIMS1, SNARESERP and HGS. Binds STRXIA in a ternary complex with runnary complex with the symbol of the symbo Rodriguez A.C., Grimwood J., Schmutz J., Myers R.M., Butterfield Y.S.N., Krzywinski M.I., Skalska U., Smailus D.E., Schnerch A., Schein J.E., Jones S.J.M., Marra M.A., "Generation and initial analysis of more than 15,000 full-length human 94 Event=Alternative splicing, Named isoforms=2; Comment=Isoforms differ by the usage of two alternative homologous exons (5a and 5b) which encode for positions 56 to and differ only in 9 positions out of 39; MIM, 600322; -.

    Fimilarity).
    SUBDIAT: Part of the SNARE core complex containing SNAP25, VAMP2 and STX1A. This complex binds CPLXI. Interacts with TRIM9, RIM81, SNAP2SBP and HGS. Binds STXBP6. Found in a ternary complex with STX1A and VAMP8 (By similarity).
    PIT: Palmitoylated (By similarity).
    SIMILARITY: Belongs to the SNAP-25 family.
    SIMILARITY: Contains 2 t-SNARE coiled-coil homology domains.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gapa
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   TISSUE-Hippocampus;

            invention further relates to be united programs countries which comprise a donor fluorophore, an acceptor having an absorbance appetrrum overlapping the emission spectrum of the donor fluorophore and a BoNT A or BoNT/B recognition spectrum of the donor fluorophore and a BoNT A or BoNT/B recognition sequence comprising a cleavage site, where the cleavage site intervenes between the donor fluorophore and acceptor and under the appropriate conditions, the resonance energy transfer is exhibited between the donor and acceptor. Natural targets of clostridium neurotoxins include VAMP (synaptobrevin), SNAP-25 and syntaxin. Sequences of the invention are useful in assaying for the procease activity of any clostridial toxin including bacterial, baculoviral and yeast toxins (TeNT) in a sample including bacterial, baculoviral and yeast samples consist of the supersessed foods, beverages, animal feed, soil
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Botulinum serotype A/E substrate useful for assaying protease activity of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        /note= "DABCYL-modified Lysine; This residue is given as Xaa in the sequence shown as SEQ ID NO: 94 in the sequence listing of the specification"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     /note= "EDANS-modified Glutamate; C-terminal amide; This residue is given as Xaa in the sequence shown as SEQ ID NO: 94 in the sequence listing of the specification"
                                                                                                                                                                                                                                                                                                               purification
                                                                                                                                                                                                                                                 samples, water samples, cosmetics, tissue samples and beverage or food samples. They are useful to assay a sample from a human or animal, for e.g., exposed to clostridial toxin or having one or more symptoms of a clostridial toxin, to follow activity during production and purification of clostridial toxin and to assay formulated clostridial toxin products including pharmaceuticals and cosmetics. The present sequence is fret substrate peptide used in the exemplification of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Clostridium toxin; protease activity; botulinum toxin; BoNT; TeNT; tetanus toxin; VAMP; synaptobrevin; SNAP-25; syntaxin; pharmaceutical;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps

```
inte present interaction to the control substrates to invention further relates to botulinum serotype A/B (BONT/A/E) substrates which comprise a donor fluorophore, an acceptor having an absorbance spectrum overlapping the emission spectrum of the donor fluorophore and a BONT A or BONT/E recognition sequence comprising a cleavage site, where the cleavage site intervenes between the donor fluorophore and acceptor and under the appropriate conditions, the resonance energy transfer is exhibited between the donor and acceptor. Natural targets of clostridium neurotoxins include VAMP (Synaptobrevin), SNAP-25 and syntaxin. Sequences of the invention are useful in assaying for the protease activity of any clostridial toxin including bacterial, baculoviral and yeast lysate, raw, cooked or processed foods, beverages, animal feed, soil samples, water samples, cosmetics, tissue samples and beverage or food samples. They are useful to assay a sample from a human or animal, for e.g., exposed to clostridial toxin or having one or more symptoms of a clostridial toxin, to follow activity during production and purification of clostridial toxin and to assay tormulated clostridial toxin products including pharmaceuticals and cosmetics. The present sequence is fret substrate peptide used in the exemplification of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
botulinum toxins, comprises donor fluorophore, acceptor and a clostridial toxin recognition sequence that includes a cleavage site.
                                                                                                 the present invention relates to novel clostridium toxin substrates. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Clostridial toxin; protease activity; tetanus toxin; botulinum toxin; FRET; flourescence resonance energy transfer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          FRET substrate #8 to analyse proteolytic activity of botulinum toxin.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            /note= "EDANS labelled glutamate; C-terminal amide"

The invention relates to an enzymatic assay for the quantitation of type A botulinum toxin, by determining the proteolytic activity of botulinum coxin, by determining the proteolytic activity of botulinum coxin A has neurotoxin type A using fluorescamine detection. Botulinum toxin A has been shown to cleave the synaptosomal neurotransmitter peptide SNAP25 between residues 197-198. The method comprises adding an analogue (e.g. AAY44022-Y44076) of the SNAP25 peptide (AAY44021, amino acids 187-203 of human SNAP25) to a sample conteaining the botulinum coxin A so that buman SNAP25 to a sample conteaining the botulinum coxin A so that can each time point by combining with a label capable of detecting free at each time point by combining with a label capable of detecting free amount of botulinum toxin A present in the sample is determined by comparing measured amount of label produced from a known concentration of toxin measured under similar conditions. The method is useful for the quantitation of

The invention relates to an enzymatic assay for the quantitation of type A botulinum toxin, by determining the proteolytic activity of botulinum acurotoxin type A using fluorescanine detection. The method comprises adding an analogue (e.g. AAV44022-Y44076) of this peptide (which represents amino acids 187-203 of the human synaptosomal protein SNAP25) to a sample containing the botulinum toxin A so that hydrolysis of the peptide is intirated, then stopping hydrolysis of the peptide is intirated, then sucuring the amount of hydrolysis at each time point by combining with a label capable of detecting free amino groups resulting from the hydrolysis. The amount of botulinum toxin A present in the sample is determined by comparing measurements with the amount of label produced from a known concentration of toxin measured under similar conditions. The method is useful for the quantitation of
                                                                                                                                                          Enzymatic assay, quantitation; type A botulinum neurotoxin; proteolysis;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to a nucleic acid molecule encoding a botulinum neurotoxin light chain (BoNT LC) serctype A, where the DNA has a sequence that is expressible in a host organism other than Clostridium, or has a total A+T content that is less than about 70% The BoNT LC protein is useful in vaccination against botulism, for eliciting protective immunity in a mammal, for treating dystonias, spacificity, pain, coular motility, facial dyskinesias, stiff-person syndrome, bladder dysfunction, segmental myoclonus, hyperkinetic disorders, cosmetic treatment of facial wrinkles, conditions characterised by hyperactivity of the lower motor neuron, and to control autonomic nerve function or tippoe walking due to stiff muscles common in children with cerebral palsy. The sequences are also useful for screening for botulinum neurotoxin inhibitors. This sequence represents a human polypeptide C-terminal fragment, used in the scope of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Human, clostridium toxin, protease activity, botulinum toxin, BoNT; TeNT,

The present invention relates to novel clostridium toxin substrates. The invention further relates to botulinum serotype A/B (BoNT/A/B) substrates which comprise a donor fluorophore, an acceptor having an absorbance apectrum overlapping the emission spectrum of the donor fluorophore and a BONT/B recognition sequence comprising a cleavage site, where the cleavage site intervenes between the donor fluorophore and acceptor and under the appropriate conditions, the resonance energy transfer is exhibited between the donor and acceptor. Natural targets of clostridium neurotoxins include VAMP (synaptobrevin), SNAP-25 and syntaxin. Sequences of the invention are useful in assaying for the protease activity of any clostridial toxin including botulinum toxins of all serotypes and tetanus toxins (TeNT) in a sample including bacterial, baculoviral and yeast toxins (TeNT) in a sample including bacterial, baculoviral and yeast toxins water samples, cosmetics, tissue samples and beverage or food samples. They are useful to assay a sample from a human or animal, for e.g., exposed to clostridial toxin or having one or more symptoms of a clostridial toxin, to follow activity during production and purification or process. The present sequence is human or sunance to the sunance or sunance to sunance to sunance and sunance to sunance the sunance to sunance the sunance to sunance sunance sunance sunanc
                                                                                                                                                                                                                                                                                                                                         Botulinum serotype A/B substrate useful for assaying protease activity of botulinum toxins, comprises donor fluorophore, acceptor and a clostridial toxin recognition sequence that includes a cleavage site.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Clostridial toxin; protease activity; tetanus toxin; botulinum toxin;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       100.0%; Score 68; DB 6; Length 17; 100.0%; Pred.                                                                                                                                             Determining clostridial toxin protease activity, by treating sample with clostridial substrate with donor fluorophore, acceptor, toxin recognition sequence, under conditions which exhibit resonance energy transfer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to a method of determining (M1) clostridial toxin activity, comprising contacting cell with sample comprising clostridial toxin substrate with donor fluorophore (F), acceptor (A) with an absorbance spectrum overlapping emission spectrum of fluorophore clostridial toxin recognition sequence with cleavage site intervening
                                                                                                                                                                                                                                        The present invention provides clostridial toxin substrates useful in assaying for the protease activity of any clostridial toxin including toxins of all serotypes as well as tetanus toxins. The present sequence is human SNAP-25 BONT/A (botulinum neurotoxin serotype A) recognition
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Determining clostridial toxin activity, comprises contacting cell with sample comprising substrate with donor fluorophore, acceptor and recognition sequence, exciting fluorophore, and determining resonance energy transfer of contacted cell.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    clostridial toxin; fluorophore; clostridial toxin product; BOTOX; food

Determining clostridial toxin activity, comprises contacting cell with sample comprising substrate with donor fluorophore, acceptor and recognition sequence, exciting fluorophore, and determining resonance energy transfer of contacted cell.

Disclosure; SEQ ID NO 68; 188pp; English.

The invention relates to a method of determining (M1) clostridial toxin activity, comprising contacting cell with sample comprising clostridial toxin substrate with donor fluorophore (P), acceptor (A) with an absorbance spectrum overlapping emission spectrum of fluorophore clostridial toxin recognition sequence with cleavage site intervening between (F) and (A), where under appropriate conditions resonance transfer is exhibited between fluorophore and acceptor, exciting the donor fluorophore, and determining resonance energy transfer of the

ö contacted cell relative to a control cell, where a difference in resonance energy transfer of the contacted cell as compared to the control cell is indicative of clostridial toxin activity. (MI) is useful for determining clostridial toxin activity, where the sample is a crude cell lysate, isolated clostridial toxin, formulated clostridial toxin product, BOTOX or food. (MI) is an automated high-throughput assay. (MI) reduces the need for animal toxicity studies and serves to analyze multiple toxin functions such as binding a cellular uptake of the toxin, translocation into the cell cytosol and protease activity. In the method MI, the clostridial toxin substrate is a botulinum toxin substrate selected from a BONT/A, BONT/B, BONT/C, BONT/F, a recognition sequence for a botulinum toxin used as the clostridial Determining clostridial toxin protease activity, by treating sample with tagged toxin substrate comprising fluorescent protein, first and second partner of affinity couple and assaying fluorescent cleavage product in Gaps Human SNAP-25 substrate BoNT/A recognition sequence, SEQ ID NO: 30. ; 100.0%; Score 68; DB 8; Length 17; 100.0%; Pred. The present invention relates to a method for determining protease activity of clostridial neurotoxins such as botulinum neurotoxin (BONT) and tetamus neurotoxin (TeNT). The method involves treating with a sample, in solution phase under conditions suitable for clostridial toxin protease activity, a tagged toxin substrate (e.g. SNAP-25, VAMP, souples and clostridial toxin recognition sequence comprising fluorescent protein, first partner of affinity couple and clostridial toxin recognition sequence comprising cleavage site; contacting treated sample with second partner of affinity couple; and assaping present elevance clostridial sequence is the human SNAP-25 substrate BONT/A (botulinum neurotoxin serotype A) recognition sequence.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           inte present interaction to control to control to comprise a donor fluorophore, an acceptor having an absorbance which comprise a donor fluorophore, an acceptor having an absorbance spectrum overlapping the emission spectrum of the donor fluorophore and a BONT A or BONT/E recognition sequence comprising a cleavage site, where the cleavage site intervenes between the donor fluorophore and acceptor and under the appropriate conditions, the resonance energy transfer is exhibited between the donor and acceptor. Natural targets of clostridium neurotoxins include VAMP (synaptobrevin), SNAP-25 and syntaxin. Sequences of the invention are useful in assaying for the processe activity of any clostridial toxin including botulinum toxins of all serotypes and tetanus toxins (TeNT) in a sample including bacterial, baculoviral and yeast toxins (TeNT) in a sample, tissue samples and beverage or food samples, water samples, cosmetics, tissue samples and beverage or food samples. They are useful to assay a sample from a human or animal, for e.g., exposed to clostridial toxin or having one or more symptoms of a clostridial toxin, to follow activity during production and purification or control or having one or more symptoms of a not location and cosmetics. The present sequence is human control or human or man and purification control.
                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Botulinum serotype A/B substrate useful for assaying protease activity of botulinum toxins, comprises donor fluorophore, acceptor and a clostridial toxin recognition sequence that includes a cleavage site.
                                                                                                                                                                                                                                                                                                                                                                                                                   Human, clostridium toxin, protease activity, botulinum toxin, BoNT, TeNT,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention provides clostridial toxin substrates useful in assaying for the protease activity of any clostridial toxin including toxins of all serotypes as well as tetanus toxins. The present sequence is human SNAP-25 BONT/A (botulinum neurotoxin serotype A) recognition
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                clostridial toxin; fluorophore; clostridial toxin product; BOTOX; food.

The invention relates to a method of determining (MI) clostridial toxin activity, comprising contacting cell with sample comprising clostridial activity, comprising contacting cell with sample comprising clostridial coxin method for fluorophore (F), acceptor (A) with an absorbance appectrum overlapping emission spectrum of fluorophore clostridial toxin recognition sequence with cleavage site intervening clostridial toxin recognition sequence with cleavage site intervening transfer is exhibited between fluorophore and acceptor, exciting the donor fluorophore, and determining resonance energy transfer of the contacted cell relative to a control cell, where a difference in resonance energy transfer of the contacted cell as compared to the control cell is indicative of clostridial toxin activity. (MI) is useful control cell is indicative of clostridial toxin activity, where the sample is a crude cell repart of the contacted cell as compared clostridial toxin, formulated clostridial toxin, formulated clostridial toxin, product, BOTOX or food. (MI) is an automated high-throughput assay. (MI) reduces the need for animal toxicity studies and serves to analyze contacted from a BOMT/A, BOMT/B, BOMT/CI, CANCER CONTENTIBLE CONTENTI
                                                                                                                                                                                                                                                                                                                                                                                                                                                       Determining clostridial toxin activity, comprises contacting cell with sample comprising substrate with donor fluorophore, acceptor and recognition sequence, exciting fluorophore, and determining resonance energy transfer of contacted cell.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Disclosure; SEQ ID NO 54; 188pp; English.

Sequence 92, Application No. US20030143650A1

GENERAL INFORMATION:
APPLICANT: Steward, Lance E.
APPLICANT: Steward, Lance E.
TITLE OF INVENTION: Fer Protease Assays For Botulinum
TITLE OF INVENTION: Sarotype A/F Toxins
FILE REFERENCE: P-AR 4803
CURRENT FILING SAROTY NUMBER: US/09/942,024
CURRENT FILING SARE: 2001-08-28
NUMBER OF SEQ ID NOS: 96
SEQ ID NOS: 96
LENGTHARE: PastSEQ for Windows Version 4.0
LENGTH: 19
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 95. Application US/09942024; Sequence 95. Application No. US20030143650A1; GENERAL INFORMATION:
APPLICANT: Fermandez-Salas, Ester; APPLICANT: APA, Rei Roger; APLICANT: APA, Rei Roger; TITLE OF INVENTION: Fret Protease Assays For Botulinum
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           OTHER INFORMATION: Synthetic peptide

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence 4, Al

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence 4, Application US/08819286

Patent No. 6169074

GENERAL INFORMATION:
APPLICANT: Monutal, Mauricio
TITLE OF INVENTION: NEUROTRANSMITTER SECRETION BY NEURONAL CELLS
NUMBER OF SEQUENCES: 29
CORRESPONDENCE ADDRESS:
ADDRESSEE: Fish & Richardson P.C.
                                                                                                                                                                                                                                                  GENERAL INFORMATION:
